# IMPACT REPORT

**Join The Christie  
against cancer**

**The Christie Charitable Fund  
Impact Report 2015–16**

'It is the continued passion, loyalty and enthusiasm of our supporters that has made this a truly outstanding year.'

## WELCOME

Welcome to our Impact Report for 2015/16, highlighting and celebrating the successes and achievements of The Christie Charitable Fund.

In the last financial year we raised a record breaking £15.9 million. This is a tremendous amount and would not be possible without our incredibly supportive and loyal fundraisers and donors.

The objectives of our charity are to support the development of cancer prevention, treatment, research and education and this year we have met these objectives by investing in projects which have improved our patients' and carers' experiences, along with high quality research programmes.

We have also backed innovation in our services, and supported the training and development of staff – all of which helps us provide better and more effective care and treatment for our patients.

We would like to thank everyone who gives their time to raise funds for us and encourages the wider community to embrace The Christie charity. We would also like to thank the volunteers who give up their time to support the charity by assisting at events and helping out at the tea bar in the hospital which is funded by the charity.

It is the continued passion, loyalty and enthusiasm of our supporters that has made 2015/16 a truly outstanding year. It has allowed us to continue our aim to improve the care, treatment and outcomes for patients, and ultimately bring us a step closer to a future without cancer.

This year you helped us  
raise a record breaking

**£15.9 million**

And we made sure that  
**86p in every pound raised**  
went directly to benefit patients  
and their families.

**86p**

## HOW YOU HELPED US MAKE A DIFFERENCE

The Christie charity delivers projects, equipment and improvements that are over and above what the NHS funds, enabling us to give patients access to the best care, research and treatment possible.

Here are details of just some of the projects and services your generosity helped us to fund last year.

- Over £45,000 was invested in educational courses to help shape the talent of the future, and in addition, we also funded some educational bursaries and scholarships.
- We invested £2 million to help provide the infrastructure to bring more world-class scientists to Manchester in the state-of-the-art Manchester Cancer Research Centre (MCRC) facility which opened in June 2015.

- Work began in July 2015 on building the UK's first NHS high energy proton beam therapy (PBT) centre. The Charity has pledged £5.6 million to create a dedicated research space within this development.
- We committed £1.7 million towards research, supporting early phase clinical trials along with a number of posts as part of the academic investment plan supporting the MCRC.
- We fund a range of award-winning complementary therapies free of charge to patients and their carers. These include massage, aromatherapy, hypnotherapy, acupuncture and reflexology to help patients through treatment and to minimise the stress of living with cancer. Therapy sessions also help patients who wish to stop smoking or reduce their alcohol intake before beginning chemotherapy treatment.

It is thanks to your generosity, support, contributions and gifts that we are able to do the life-changing and potentially life-saving work we do. And over the next few pages we will be showing you some examples of how your help is providing immeasurable benefits. On behalf of our patients and staff, we thank each and every one of you.

'On behalf of our patients and staff, we thank each and every one of you.'

'Your support for proton beam therapy research allows us to maximise the benefits to every patient.'

## VITAL FUNDS FOR PROTON BEAM THERAPY RESEARCH

2018 will see the opening of the UK's first NHS high energy proton beam therapy centre based at The Christie. The centre will be one of only two in the UK, the other will be based at University College London Hospitals NHS Foundation Trust. Our charity is making a vital contribution to the project by funding essential proton beam therapy research.

Proton beam therapy is a specialist form of radiotherapy that targets certain cancers very precisely and will help us to save as many lives as possible from cancers which other therapies are unable to treat effectively. Patients, many of whom are children, currently have to travel abroad for this treatment.

The Christie wants to be at the forefront of proton beam therapy research to ensure our patients receive the most effective treatment as soon as the centre opens. Helping us achieve this is Professor Karen Kirkby, who will lead the team at The Christie charity funded proton research room based within the new proton beam therapy centre.

Professor Kirkby took up her post in January 2015. This post is funded by The Christie and The University of Manchester and will develop a research portfolio around the NHS funded (£125m) clinical proton facility at The Christie. The Christie charity has pledged £5.6m to fund a research room within this facility.

A multi-disciplinary team including physicists, engineers, clinicians and biologists will work together to develop a national research programme to underpin the development of this groundbreaking treatment.

In simple terms we want to find out if we can deliver proton beam therapy faster and more effectively. And we want to reduce the number of painful and debilitating side effects that patients undergoing treatment experience. Your support for proton beam therapy research will allow us to improve the way in which this treatment is delivered, to maximise the benefits to every patient.

## HELPING TO MAKE THINGS POSSIBLE

**Oldham businessman Sir Norman Stoller CBE has been a staunch supporter of The Christie charity for many years with donations dating back as far as the early 90s.**

He created The Stoller Charitable Trust in the 1980's and has been a constant and consistent supporter of The Christie charity.

Sir Norman says: "I had cancer of the colon in 1997 and a fabulous surgeon saved my life. I then got cancer of the prostate in 2012, and they say that anyone who has cancer twice is just greedy! The Christie is one of the most fantastic centres of excellence in its field and so who wouldn't want to help it?"

The Trust recently presented our charity with a £200,000 donation towards a dedicated research room in the UK's first NHS high energy proton beam therapy centre. This generous donation is part of an incredible £500,000 pledge which will be given to us in instalments up until 2018 when the proton beam therapy centre opens.

With help from supporters like Sir Norman, we have been able to bring together a team of the best scientists, engineers and clinicians to look at how protons interact, where they deposit their dose and how we can localise their damage to the tumour. Our research room within the new centre will continue this work.

Sir Norman adds: "The Stoller Charitable Trust doesn't give money away, it gives money back. It's a joy that we have the privilege of giving – it's life enhancing. Charity in my opinion always starts at home and that's why I'm pleased to be able to support the research room at the new proton beam therapy centre."

'The Christie is one of the most fantastic centres of excellence in its field, and so who wouldn't want to help it?'

A scientist in a white lab coat is looking down at a rack of test tubes. The rack is filled with many small, clear plastic test tubes with colorful caps (red, purple, green, yellow, orange, pink, blue). The background is slightly blurred, showing a laboratory setting.

'More than 600 clinical trials are open at any given time at The Christie.'

## PIONEERING BREAKTHROUGHS IN RESEARCH

The Christie has been pioneering cancer research breakthroughs for over 100 years. These don't just benefit people on our doorstep, but cancer patients across the world.

Last year saw the opening of the new £28.5 million Manchester Cancer Research Centre (MCRC), a partnership between The University of Manchester, The Christie and Cancer Research UK. The MCRC's vision is the development of personalised cancer treatments leading to better patient outcomes. £2.7 million of the development was funded by The Christie charity.

The Christie is at the forefront of phase 1 clinical trials and world-leading scientists are working to ensure that all cancer patients receive personalised treatment from the day of diagnosis, based on their genetic make-up and that of their tumour.

More than 600 clinical trials are open at any given time at The Christie and approximately one in five of our patients take part in research at some point during their treatment.

## THANK YOU FOR SAVING MY LIFE

**Father of one, Craig Reid from Macclesfield, was just 30 years old when he was diagnosed with Non Hodgkin lymphoma and given the devastating news that he had just a 40% chance of survival.**

He says: "It was a huge shock as I thought it was just tonsillitis. I had my tonsils removed and after various scans and tests I was told I had stage four cancer in my spleen and neck. I had to come to terms with the very real possibility that I might never see my daughter Daisy grow up."

Craig underwent chemotherapy and a clinical trial, and at a recent check-up was given the news he and his family had hoped for.

He says: "Thankfully The Christie gave me the opportunity to take part in a clinical trial and 12 months on I am well and back at work. Clinical trials are so important to patients like me and can literally make the difference between life and death.

"Without the opportunity to go on a clinical trial my future looked bleak. I have a two year old daughter who could have grown up without her daddy. I know that The Christie charity supports the amazing work of the clinical trials unit and that's one of the reasons my friends and I are taking part in a coast to coast cycle ride.

"It's my way of giving something back, and saying thank you for saving my life."

More than 600 clinical trials are open at any given time at The Christie and our charity funds a number of these.

'I had come to terms with the very real possibility that I might never see my daughter Daisy grow up.'

## TRANSFORMING TREATMENT

We pride ourselves on being able to offer the very latest and most innovative technology for our patients.

We wouldn't, of course, be able to acquire this advanced technology without the backing and commitment of our supporters who provided £850,000 of funding for a state-of-the-art 3-D CT gamma camera which will transform the diagnosis and treatment of cancer.

Fundraising for the camera ended in 2014/15, and patients started being treated with the camera last year.

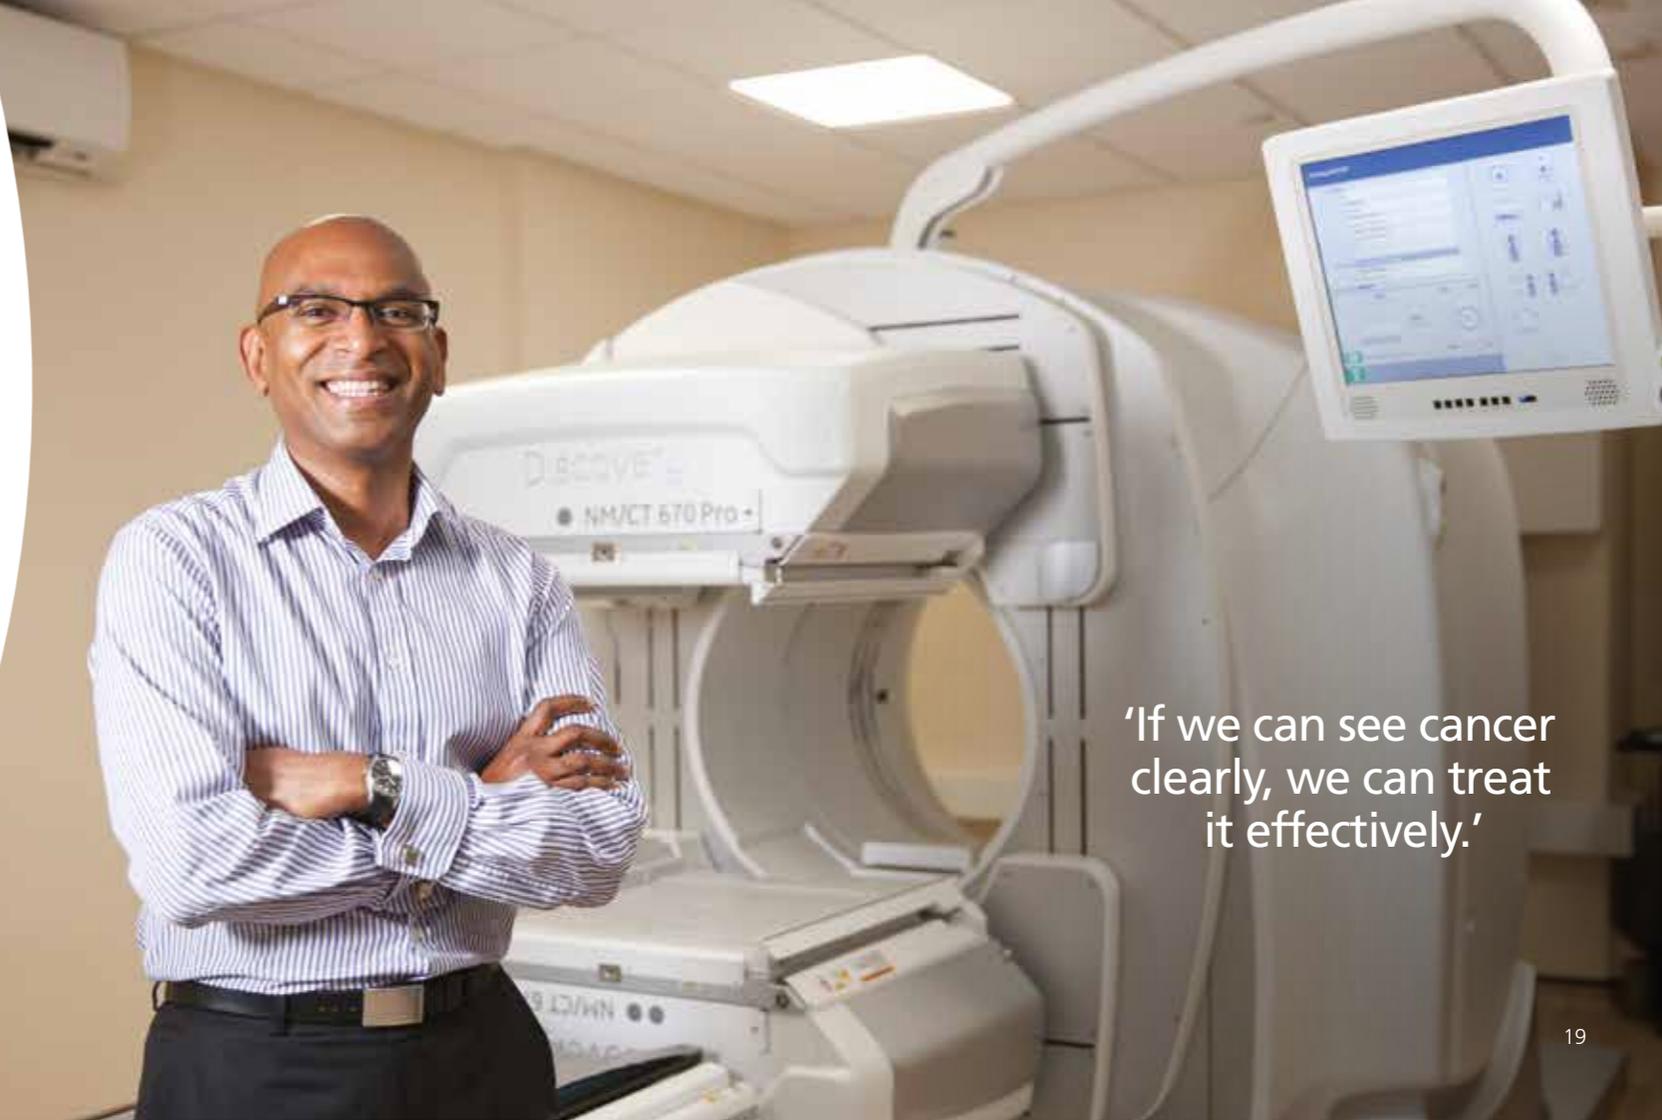

Dr Prakash Manoharan, clinical lead for MRI, PET CT and nuclear medicine at The Christie, said simply: "If we can see cancer clearly, we can treat it effectively."

The camera will make it easier to find out if patients are suitable for personalised 'radionuclide' therapies including Selective Internal Radiation Therapy (SIRT), a treatment that has been trialled at The Christie.

The Christie is the leading centre in the UK for SIRT for the treatment of liver cancers. In carefully selected patients, SIRT enables us to deliver radioactive particles – as fine as a grain of sand – directly to a patient's tumour. Each tiny particle is packed with enough radiation to treat the tumour, even those tumours that have become resistant to chemotherapy.

Dr Manoharan continues: "This exciting new development will bring major improvements in the diagnosis and treatment of patients, and in the future will be used to plan targeted therapies for particular cancers.

"The project has captured the support of many of our dedicated fundraisers and without them this major advance for The Christie would not have been possible."

'If we can see cancer clearly, we can treat it effectively.'

## DEVELOPING EXPERTISE THROUGH EDUCATION

**Team leader and clinical nurse specialist in palliative care, Anne-Marie Raftery was awarded a charity funded educational bursary to visit two cancer centres in America to observe how they deliver palliative care.**

Palliative care helps patients and families live as actively as possible through their cancer journey by providing high quality pain and symptom control, as well as practical and psychological support.

As an experienced palliative care nurse, Anne-Marie was well placed to carry out the project, observing the practices of a different healthcare system which could inform and develop the specialist service at The Christie.

Over the two visits, which totalled 21 days, she visited Memorial Sloan Kettering Cancer Centre in New York City and the Massachusetts General Hospital in Boston.

Anne-Marie says that it was invaluable to observe the early integration of palliative care on inpatient wards and across outpatient care from two world-class cancer centres.

She says: "It has given me the confidence to trial a different way of working to meet the future needs of our patients far earlier in their cancer journey, which can provide a better quality of life by improving or preventing symptoms. We will be taking this and a number of other learnings forward at The Christie.

"I'm delighted that our charity has been able to support me in expanding my knowledge and skills within specialist palliative care which will be used to continually develop and improve services for our patients."

Anne-Marie's bursary was funded by the Tompkins family.

'I'm delighted that our charity has been able to support me in expanding my knowledge and skills.'

## CREATIVITY OVER CANCER

The Christie charity works hard to provide specialist staff and supportive services that can help patients through their cancer experience. The art room, based at our main site in Withington, delivers art sessions for patients, carers, staff and volunteers, several times a week.

Led by artist in residence, Pat Mountford, who is funded by the charity, the aim of the classes is to provide a space to explore creativity away from the daily pressures of life, including living with cancer.

Pat says: "I believe every hospital should have an art room. When a patient walks through the doors, they can often be dealing with lots of difficult situations beside their illness. This can leave them feeling frightened, very vulnerable and lacking in confidence. Sitting in the art room and meeting people in a similar situation, forgetting about everything else, doing something creative that you didn't know you could do, is incredibly empowering.

"It's not about the art, and yet it's everything about the art."

Ovarian cancer patient, Shamim Chaudhry from Stockport, says: "I would never have believed that when I came to The Christie I would be painting, as I had never done anything creative before.

"From the beginning I have felt sheer joy from coming to the art classes. It's a place where I feel safe at a time when I have been at my most vulnerable. When I'm in the art room I'm totally absorbed in the painting, forgetting about the cancer and all it entails. The class makes me feel emotionally supported and nurtured."

We wouldn't be able to provide extra services such as our art classes without the support of fundraisers such as Lou and Pat Kushnick. Not only do they fundraise for our art fund in memory of their daughter Alex, but they also regularly volunteer in the art room.

A woman with dark hair, wearing a colorful patterned sleeveless top, is seated at a wooden table in an art room. She is holding a paintbrush and looking towards the camera. In front of her is an easel with a canvas displaying a landscape painting of a bridge over a river. The room is bright and filled with art supplies.

'When I'm in the art room I'm totally absorbed in the painting, forgetting about the cancer and all it entails.'

‘Whatever our fundraisers’ connections are to the cause, every single one plays a vital part.’

## THANK YOU FOR DOING WHAT YOU DO

All our fundraisers have a unique story about why they choose to help us.

Many have been patients and want to do something to say thank you for the care and treatment they have received. Other people have chosen to support us because a friend or loved one has been treated at The Christie.

And then there are those who don’t have a personal connection, but know of the important work we do and want to do their bit to help. Whatever our fundraisers’ connections are to the cause, every single one plays a vital part in our aim to improve and ultimately bring us a step closer to a future without cancer.

There are many ways of getting involved: our fundraisers have done everything from jumping out of planes or running marathons, to holding a coffee morning for friends or hosting a dress down day in the office. Every penny raised helps our patients and their families and we’re grateful to all our supporters for their vital work.

'I always imagine Paul looking down and smiling to himself when I'm out running.'

## ANGELIKA WRIGHT

**Fundraiser Angelika Wright has taken on numerous sporting challenges for The Christie in memory of her husband Paul who died of oesophageal cancer in January 2010.**

Angelika, 56, from Whaley Bridge, took up running shortly after Paul's death at the suggestion of one of his colleagues who persuaded her to take part in the Manchester 10K. As a complete beginner she built up her fitness in preparation for the race and decided to raise money for The Christie.

She says: "I loved every moment of that first race. At the seven kilometre marker we passed The Christie cheering point, and we had friends there shouting for us and taking pictures – the atmosphere was just amazing."

Six years on and Angelika is still inspired by her late husband to keep running. Last year she marked the fifth anniversary of his death along with her 55th birthday by completing a gruelling 'five challenge.'

She ran five 10k races and five half marathons throughout the year bringing her fundraising total to more than £70,350. Such is Angelika's commitment to The Christie that she has set up a tribute fund in memory of Paul and also has a leaf on The Christie's Tree of Hope which is engraved with Paul's name and acknowledges Angelika reaching a £15,000 fundraising milestone.

And it doesn't stop there as she has already signed up for the Manchester Half Marathon and the Greater Manchester Half Marathon for The Christie, and is hoping to secure a place in the London Marathon.

She says: "The running and fundraising has really helped me as I feel I'm doing something positive for both Paul and me. I always imagine Paul looking down and smiling to himself when I'm out running."

## BARBARA TURNER

**Barbara Turner pledged a gift in her Will to The Christie to say thank you for the life-saving treatment her son Richard received 30 years earlier.**

**In 1984 Richard was just 18 and starting his first term at university when he was diagnosed with a pineal brain tumour.**

“I visited him every day during his stay at The Christie, and not once did I feel that there was no hope; it’s a very uplifting place.” says Barbara.

“I know they invest their money wisely at The Christie, and every pound really does count. We owe them so much. It’s priceless what we owe them.”

There are many people like Barbara who decide to leave us a gift in their Will for many different reasons, whether it’s to say thank you, remember a loved one, or leave a gift for the future. Each year we are able to do amazing things with these legacies and support projects which otherwise wouldn’t be able to happen.

Throughout 2015/16 half of our projects were made possible thanks to the kindness of our supporters who decided to leave us a legacy. If you have pledged a gift in your Will to The Christie, thank you. No matter how large or small, your gift will make a real difference to the work we are able to do.

‘I know they invest their money wisely at The Christie, and every pound really does count.’

## OUR ARMY OF VOLUNTEERS

Supporting our charity is not always about money. Your time is just as valuable to us. David and Michelle Basger, from Cheadle in Stockport have been volunteering at The Christie for over a year.

They have donated hundreds of hours of time following Michelle's treatment for breast cancer in 1998 and secondary breast cancer in 2010.

David says: "Following the successful treatment of my wife's cancer we both decided we wanted to give something back to the wonderful hospital that saved Michelle's life.

"Michelle and I worked together for 38 years in our underwear wholesale business, but when we retired we wanted to give The Christie something that was really precious to us, our time."

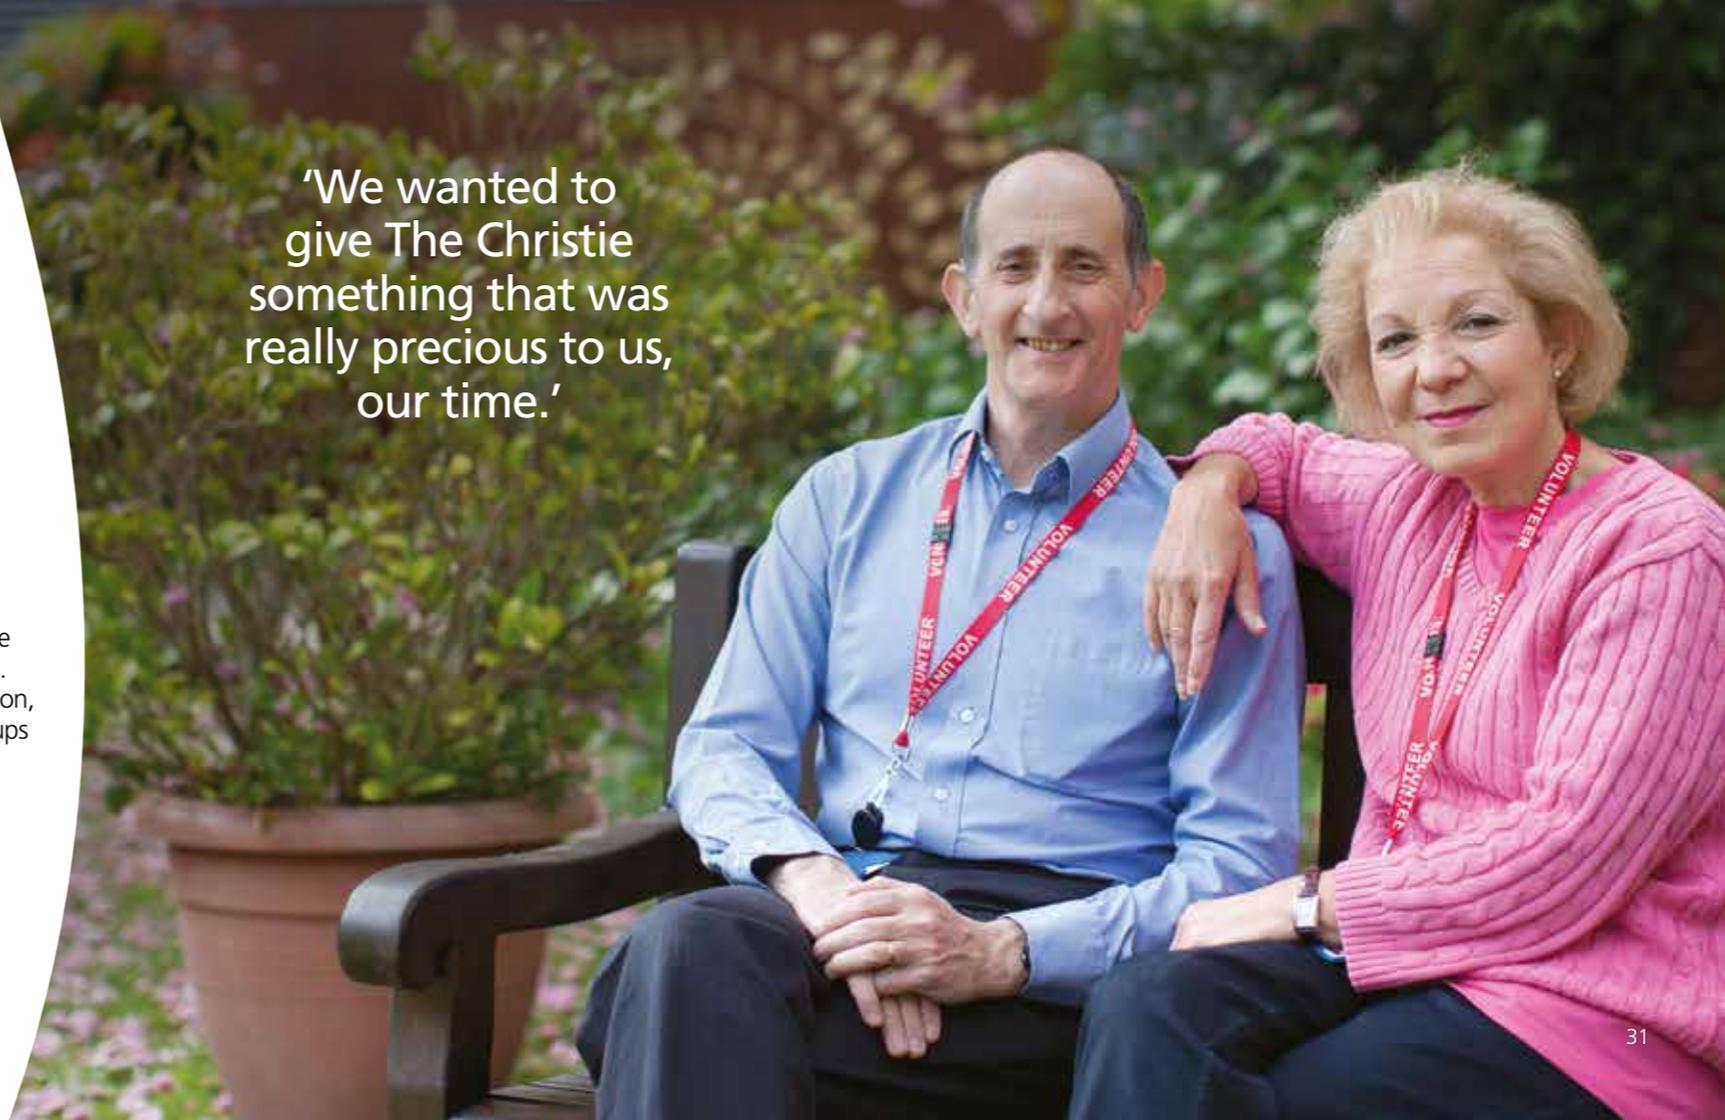

Volunteers are vital to our charity which could not function without their generous support. They contribute time and skills to help with our work, ensuring that we continue to raise the funds needed to provide the best care, treatment and research for our patients.

David volunteers his time in health records and the endocrinology department providing administrative support that ensures the smooth running of the hospital. Michelle spends her time at our May Draper Tea Bar and the 'Look Good, Feel Better' service.

David says: "I really love the time I spend volunteering, it gives me so much satisfaction to know I am part of the seamless process that works behind the scenes for the patient. And Michelle finds it so rewarding to provide comfort to others who are going through what we have been through. Volunteering at The Christie has helped us get over our own experience of cancer.

"It's amazing how much support there is for the charity, it is everywhere when you walk around the hospital... in the new buildings under construction, the brand new equipment and the cups of tea on offer to patients. Thanks to the charity, The Christie is constantly improving."

'We wanted to give The Christie something that was really precious to us, our time.'

# WE STILL NEED YOUR HELP MORE THAN EVER

## Looking ahead

We hope you will see from this report just how important your support is to the care and treatment that The Christie is able to provide, not only to our current patients, their families and carers, but also for those who will need our services in the future – thank you.

We never stand still at The Christie and always have ambitious plans and schemes in the pipeline, but all of these need your support and backing. For information about any of these projects, and how you can support them, please get in touch with our charity team on [appeals@christies.org](mailto:appeals@christies.org) or 0161 446 3988.

## Proton beam therapy

Work is well underway at our new proton beam therapy centre due to open in 2018. Whilst this is an exciting and long-awaited development for cancer patients here in the UK, there are some limitations to proton beam therapy.

But we are confident these can be overcome through further research, and so we are aiming to raise £5.6 million to develop a dedicated research room within the new centre.

## Integrated procedures unit

In Summer 2017 we will be opening our new Integrated procedures unit (IPU) located above the main Oak Road entrance. By integrating and expanding a number of treatment services, we can speed up treatment sessions, eliminate transfers between departments and minimise the need for overnight stays. This will mean shorter waiting times for day-patients who need to see our plastic surgery, endoscopy, radiology, pain management or day case procedures teams. We are currently raising £4.8m to build the new IPU.

## MR Linac

We are currently raising £1m towards the total cost of £5.3m to bring a revolutionary MR Linac machine to the hospital. It will enable us to deliver more targeted, personalised and advanced radiotherapy for our patients. It will be one of only two such machines in the UK and only seven in the world. It could change the way we deliver radiotherapy at The Christie – forever.

## Patient entertainment system

We are aiming to raise £584,000 to replace the current outdated bedside TV/phone system with a new high tech patient multimedia entertainment and information system which will be similar to an in-flight 'infotainment' service. It will include TV, radio and internet and both inpatients and outpatients will be able to access the system through their own tablet devices.

'All our projects need your support and backing.'

# THANK YOU

We would like to extend a special thank you to all the individuals and organisations that have so generously supported us throughout 2015/16. On these pages we have endeavoured to include all those who raised or donated £4,000 or more throughout the year, but however much you contributed, we are truly grateful. We couldn't have done it without you.

Thank you!
