An Introduction to Cancer: Anatomy, Biology & Treatments

Wednesday 27th - Thursday 28th March 2019

Education Centre (Dept 17), The Christie, Manchester, M20 4BX

Presented by David O'Halloran

David is a former accreditor for the Higher Education Academy, Senior Lecturer in Radiotherapy, School of Healthcare Studies, University of Leeds and author of 'Notes on Anatomy and Oncology'

He established O'Halloran Consultancy Limited in November 2002 and as its Director, David continues to provide high quality education in anatomy and oncology

David specialises in delivering courses aimed at those persons who deal with complex oncological terminology yet have no background in medical science or, indeed, cancer

Previous delegate feedback

"Excellent course which was delivered in an energetic and effective way"

"Found the 2 days very interesting and by the end of the first day was eager for the 2nd day"

100% of delegates said they would recommend this course

An Introduction to Cancer: Anatomy, Biology & Treatments

Introduction

This is a two day course by David O'Halloran which presents a basic understanding of cancer. Through a series of presentations, the speaker describes how cancer develops, the commonest types of cancer, cancer detection and treatment modalities. The sessions are supplemented by quizzes to aid understanding and group interactive question and answer sessions to keep everyone engaged.

Topics Covered

- Introduction to cells, tissues and cancer
- Classification of cancer
- The spread of cancer
- Overview of treatment options
- Female reproductive system & tumours (including breast)
- Oral cavity, large intestine oncology, testicular and prostate cancer
- Circulatory system and related oncology
- Respiratory system & tumours

Intended audience

This two day course is specifically designed for staff new to oncology. Suitable for research, admin support, industry, CTU, hospice and any other staff groups who require an overview and understanding of the anatomy, biology and treatments of cancer. This course is also suitable for those who have already attended the one day treatments course by David O'Halloran. This course evaluates to a consistently excellent standard.

Learning outcomes

Upon completion of this course delegates will understand:

- Why cancer can be found in any places in the body
- Why knowledge of different cell types helps identify where certain cancers are more likely
- Why cancer has the ability to move and grow away from the primary site of origin
- The methods of spread such as local invasion, lymphatic and blood spread, seeding & transcoelomic spread
- How disease progression will influence pain management
- How tumours can be classified with specific consideration of staging and grading systems
- Likely treatment options for a patient with cancer
- Anatomy and oncology related specific tumour sites

Fees

£360 (non-NHS)

£220 (NHS)
