

# After your skin biopsy

This leaflet explains how to take care of your wound(s) when you leave hospital. If you have any questions, please see our contact details overleaf.

## Will I have any pain?

The local anaesthetic will begin to wear off about 30 - 40 minutes after the operation. If you experience any discomfort from your wound, you can take simple painkillers such as paracetamol to help with this.

**Always follow the instructions on the packet and never take more than the recommended dose.**

Check that the painkillers will not react with any other medicines you are taking. If you are unsure or if you have allergies to any medicines, speak to your pharmacist.

## How should I look after my wound?

- Keep your dressing dry for the first 24 – 48 hours depending on the nurse's instructions.
- After 24 – 48 hours remove your dressing and **wash the wound with soap and water** (and use shampoo if on the scalp), either by washing in a shower or by splashing the treated area with warm soapy water. The dressing may be easier to remove if you wet it first. Flowing water will help to remove any scabs that may have formed.
- **Gently pat your wound dry.**
- **Apply a thin layer of clean Vaseline®** (or antibiotic ointment if it has been prescribed for you) directly over your stitches with your clean hands. This will help to keep your wound clean and moist and will prevent scabs from forming.
- **Apply a waterproof plaster (not fabric) directly over the wound.**
- Repeat this routine **every day, once a day** until the stitches are removed by your practice nurse. If there are no stitches, repeat this routine until the wound has completely healed over.

## Bruising

This is common, especially if the area of your biopsy was close to your eyes. To help the bruising heal, avoid taking aspirin, unless your GP has prescribed this.

## Bleeding

It is unlikely that your wound will bleed, but if this happens, don't panic. Sit down and press firmly over the dressing for 15 minutes. If you are at all worried, please phone The Christie Hotline using the contact details in this leaflet. In the unlikely event you have uncontrollable bleeding, please contact your GP or go to your local Accident and Emergency department.

## Signs of infection: what to look out for

It is expected that your wound will be slightly red and tender to touch for the first couple of days after your surgery, but if the wound becomes very painful, very hot, very red and swollen, please contact your GP as soon as possible. These may be signs of infection and you may need antibiotics.

## Smoking

Try to avoid smoking for the first week after your surgery. Smoking significantly delays wound healing. It increases the risk of infection and can contribute to a more prominent scar.

## Will I have a follow-up appointment?

You will be given a follow-up appointment on the day of your biopsy only if necessary. This will vary from patient to patient.

## If you have any problems or worries, please contact:

Andrea Whitmore, Research Nurse on **0161 918 7963** or email [andrea.whitmore@christie.nhs.uk](mailto:andrea.whitmore@christie.nhs.uk)

If you need information in a different format, such as easy read, large print, BSL, braille, email, SMS text or other communication support, please tell your ward or clinic nurse.

We try to ensure that all our information given to patients is accurate, balanced and based on the most up-to-date scientific evidence. If you would like to have details about the sources used please contact [patient.information@christie.nhs.uk](mailto:patient.information@christie.nhs.uk)

For information and advice visit the cancer information centres at Withington, Oldham or Salford. Opening times can vary, please check before making a special journey.
